JP Pumps in move to optimize its Service and Repair facilities

In a move to optimise its nationwide service and repair facilities, JP Pumps, part of the Swedish based SPX – Johnson Pump Group, has announced that its service division and repair facilities will now be handled by SPX Process Equipment, Bran+ Luebbe, Brixworth, Northamptonshire. The transfer of the service department will take place from the 31st March 2008.

The JP Pumps range includes a wide variety of centrifugal pumps encompassing DIN Standard end suction types, hygienic centrifugal, self-priming liquid ring-section and multistage pumps. JP Pumps also offers a wide range of positive displacement pumps, including internal gear, air operated diaphragm, and our latest range of rotary lobe pumps.

SPX - Johnson Pump Group is an international engineering group with a pump division employing over 500 people and has factories in Sweden, Belgium, the Netherlands, India and the US. The SPX Bran+Luebbe plant at Brixworth has extensive manufacturing, engineering and maintenance facilities and lies at the centre of the Midlands motorway network. JP Pumps is continually expanding its after sales service and believes that the merging of these two operations will bring about an increased level of service to all JP Pumps customers.
