WAUKESHA CHERRY-BURRELL FOR IMMEDIATE RELEASE **UNIVERSAL II PUMPS RATED** **UP TO 500 PSI**

DELAVAN, WI (2003) — The Universal II Series includes seven models that are rated for 300 psi or more. Three models have a maximum rating between 450 and 500 psi, giving processors another option where traditionally high-pressure plunger pumps were required.

Waukesha Cherry-Burrell's Universal II pumps are designed for sanitary applications. The pumps combine 3-way mounting versatility with new features that extend pump life and improve sanitary performance.

The pump offers a rotor/shaft connection that is completely sealed from the product zone for optimum sanitary conditions. Mechanical seals are standard and several options such as free draining body and vented covers are available.

Designed for long service life, the Universal II pump design includes a heavy-duty bearing frame, larger diameter shafts in the seal area for greater strength and stiffness and double tapered roller bearings that contribute to longer seal life. Rated for pressures up to 500 psi.

The Universal II provides installation flexibility, bi-directional flow capability and CIP (Clean-in-Place) option. Installation dimensions are interchangeable with Universal Series PD pumps and three-way mounting of the gear case is possible, including vertical alignment of ports.

For information, contact the company at (800) 252-5200 or visit their web site at www.gowcb.com.
