### TrueFlow

The Bran+Luebbe TrueFlow system allows to constantly monitor the process system under self control. A major component is the TrueFlow controller which functions are accessed via a simple touch screen display for optimum ease of use.

The standard functions of the TrueFlow system are detailed below:

- Provides a flow rate within 1% of the desired flow or better.
- The operator has the freedom to alter either the motor speed & stroke length individually or together via the touch screen HMI.
- Cost effective solution giving a high level of accuracy without the purchase and installation of computer software.
- Will integrate into most control systems and workstations with minimal effort.
- Requires very little training or background knowledge in order to operate.
