NOVAPLEX Vantage

With the NOVAPLEX Vantage Bran+Luebbe is adding the classical triplex plunger pump design to its process pump range. The key component is the over the years proven APV high pressure homogenizer triplex gear.

The capacity range goes up to 45,000 l/h and pressures up to 1,500 bar.

With the NOVAPLEX Vantage Bran+Luebbe introduces an economic alternative for applications that not necessarily require a diaphragm pump head.
